

April 30, 1950.

Dr. S. S. Luxia,
Dept. Bacteriology,
Indiana University,
Bloomington, Indiana.

Dear Dr.-

I will not be able to give the MS for Methods in Medical Research very much more attention before your deadline, but believe that it is, in general, all right. Reference "6a", Bernio's paper in the February Experientia, can be given in full now, but I don't have it just at hand.

The only other point concerns table 1. which I don't have in the MS you returned to me. I am enclosing a micrographed version of same. However, if convenient, I would like to substitute Davis' minimal medium for the one presented (Tatum's), i.e. the light of my experience with it. The revision should read:

A. Minimal medium (suggested by B. D. Davis)

Glucose	2
Na ₂ HPO ₄ · 7H ₂ O	6
KCl	4
(NH ₄) ₂ SO ₄	2
Na ₂ CO ₃ · 7H ₂ O	.025
Na ₃ -citrate	.1

Lester and I have been corresponding concerning the possibility that he might give a seminar at Wisconsin. Have you made any arrangements that might bring him to the midwest around the time of the Oberlin radiobiology conference in June?

Sincerely,

Joshua Lederberg
